HPS Plant Light produce light by passing high-voltage pulses of energy through a sealed quartz tube filled with sodium vapor and a few other elements, such as xenon and mercury. When heated, the gas begins to glow. Sodium emits an intense orange, yellowish light. The spectrum can be altered using xenon and mercury, which emit in the blue range of the visible spectrum, making the light whiter.

Globally, North America, Europe and Japan are the regions with the most mature application of HPS plant lights. Well-known manufacturers in these regions have occupied a certain share in the plant light market, which has promoted the development and application of HPS plant light technology.
