The global HPV Laundry Detergents market size is expected to reach \$ 3099 million by 2032, rising at a market growth of 9.3% CAGR during the forecast period (2026-2032).

HPV laundry detergent is a type of specialized washing product that claims to inactivate human papillomavirus (HPV) on the surface of clothing. Primarily designed for underwear and other intimate apparel, it combines cleaning and disinfection functions, aiming to cut off potential routes of HPV transmission through clothing.

The core upstream raw materials for HPV laundry detergent include HPV inactivating active ingredients (complex quaternary ammonium salts, lysozyme, acidified bovine γ -lactoglobulin, IGY egg yolk antibody), surfactants (amino acid surfactants, APG alkyl glycosides, SLES, betaine), and biological enzyme preparations (protease, lipase, cellulase), etc. Downstream sales are mainly through online channels, with the core consumer group being women aged 25-45, among whom married, women planning pregnancy, and pregnant women are heavy users.

In 2025, global HPV laundry detergent sales reached 143,600 tons, with a production capacity of approximately 190,000 tons, an average selling price of US\$11,250 per ton, and an average gross profit margin of 42%-48%.
