## Abstracts

According to our (Global Info Research) latest study, the global HSC Cranes market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Electric Overhead travelling Cranes are mainly classified into three categories- Top running double girder bridge cranes, top running (T/R) single girder bridge cranes and under running (U/R) single girder bridge cranes. Further they are classified as gantry cranes, monorails, and single and double girder cranes. Single bridge crane's trolley run on bottom flange of the bridge girder and have one supporting bridge girder while double bridge girder crane's trolley runs on top flange of the bridge girder and have two bridge girder to support. In gantry electrical cranes the trolley is supports by multiple legs fixed on runways or rails. Monorail cranes only have trolley hoist and they do not require bridge girder to support. Monorail electrical cranes are generally used in production service lines and assembly lines.

Increasing construction project around the world is expected to drive the market of Electric overhead travelling crane in coming years. Growing wind energy projects around the globe will require EOT (Electric overhead travelling) cranes for their installation and thus have huge opportunities in off shore and on-shore. The use of EOT in heavy industry segments such as metallurgy, engineering equipment as well as automobiles in lifting and transferring heavy weighted loads from one point to another has been another prominent end use of EOT cranes owing to its efficient load bearing and maneuvering capabilities. The product has also witnessed a significant amount of use in inland ports and other areas of sea logistics
