The global HSS for Construction market size is expected to reach \$ 9324.1 million by 2029, rising at a market growth of 5.1% CAGR during the forecast period (2023-2029).

A hollow structural section (HSS) is a type of metal profile with a hollow cross section. Hollow Structural Sections (HSS) refers to high-strength welded steel tubing used as structural elements in buildings and other structures and a variety of manufactured products. It is produced in round, square and rectangular shapes and a broad range of sizes to the ASTM A500, A1085, and A1065 specifications. Hollow Structural Sections (HSS) come in three primary shapes: square, rectangular, and round. Each of these shapes has unique properties and advantages that make them well-suited for specific applications.
