HSS Chucking Reamers are precision cutting tools used to enlarge and finish existing holes in a workpiece, widely employed in metalworking, mold manufacturing, and other precision industries. Made from high-speed steel (HSS), these reamers offer excellent wear resistance and heat resistance, allowing them to stay sharp during high-speed cutting operations. Chucking reamers are typically used to remove a small amount of material from a hole to achieve accurate dimensions and improve surface finish. They can be mounted on machine tool chucks for processing various materials such as steel, aluminum, copper, and stainless steel.
