According to our (Global Info Research) latest study, the global HTPS LCD market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

HTPS LCD (High Temperature Poly-Silicon LCD) is a type of liquid crystal display technology that utilizes a high-temperature poly-silicon layer to drive the pixels. It offers improved performance compared to traditional LCDs, with faster response times, higher resolution, and better viewing angles. However, the production cost of HTPS LCDs is higher than that of other LCD technologies, limiting their adoption in some markets.

The industry trend for HTPS LCDs is towards continued growth in various applications, particularly in the high-end smartphone and tablet markets. As consumers demand better display performance and energy efficiency, manufacturers are increasingly turning to HTPS LCD technology to meet these requirements. However, the high cost of production and the emergence of competing technologies like AMOLED and OLED have created challenges for HTPS LCD manufacturers. To remain competitive, companies are investing in research and development to improve the performance and reduce the cost of HTPS LCD production. Despite these challenges, the demand for high-quality displays is expected to drive the market for HTPS LCDs forward in the coming years.
