According to our (Global Info Research) latest study, the global Human Anti-Herpes Simplex Virus Type 1 ELISA Kit market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Human Anti-Herpes Simplex Virus Type 1 ELISA Kit is a detection box tool for detecting whether there is antibody to single deficiency virus type 1 (HSV-1) in the human body. HSV-1 mainly causes infections above the waist, the most common sites of infection are the mouth and lips. The kit detects the presence of HSV-1-specific antibody IgG in your blood serum by means of enzyme detection, and diagnoses whether the person is infected with HSV-1 virus. The detection kit usually includes, for example, kit instructions, standard products, purified HSV-1 antigen, binding solution, auxiliary reagents, etc., and the user operates according to the steps in the instructions, and finally can obtain stable quantitative results of the antibody level in the patient's serum. The use of the test kit can provide valuable information in diagnosing HSV-1 infection, judging the time of infection and predicting the situation after the infection.
