## Abstracts

According to our (Global Info Research) latest study, the global Human-Computer Interaction Automotive Illuminated Grille market size was valued at USD 97.8 million in 2023 and is forecast to a readjusted size of USD 1586.5 million by 2030 with a CAGR of 48.9% during review period.

Automotive Illuminated Grille is an important part of the car, and the technology involved is also very high-end and advanced. As the electrification of automobiles develops faster and faster, the air intake function of traditional grilles begins to weaken. In some new car companies, the grilles gradually disappear or become smaller. Some car companies also add interactive elements to the grille design. Digital elements with mainly decorative functions, Automotive Illuminated Grilles emerged at the historic moment. Automotive illuminated grilles can personalize the front face of the car and increase the recognition of the car brand. Especially at night, the luminous grille can play a lighting role, making the front face more technological and making the entire vehicle look cooler. Starting in 2019, high-end car manufacturers such as BMW adopted Automotive Illuminated Grille in their models, setting a precedent for the market. With the continuous advancement of technology, the Automotive Illuminated Grille market shows broad prospects and is expected to expand to more automobile manufacturers and models, covering the high-end to mid-low-end markets. Human-Computer Interaction Type is a lighting device for the front of a car that not only provides lighting functions, but also has technical features that enable interaction with vehicle occupants. This Automotive Illuminated Grille can integrate various interactive elements, such as touch screens, gesture recognition, voice control, etc., allowing the vehicle's occupants to communicate and operate it. Typically, this type of Automotive Illuminated Grille can be used to display vehicle status, provide information, implement entertainment

functions, or interact with vehicle internal systems.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
