## Abstracts

The global Human Fibrinogen market size is expected to reach \$ 2846 million by 2032, rising at a market growth of 10.3% CAGR during the forecast period (2026-2032).

Human Fibrinogen is a high-purity plasma protein preparation derived from human plasma or produced through recombinant technology, with fibrinogen as its main component. It plays a crucial role in blood clotting, as fibrinogen is converted into fibrin by thrombin to form a blood clot and stop bleeding. Fibrinogen concentrate is primarily used to treat congenital or acquired fibrinogen deficiencies, manage bleeding during surgery or trauma, and address other conditions requiring rapid fibrinogen supplementation.

The market for fibrinogen concentrate is primarily driven by the increasing prevalence of bleeding disorders and surgical procedures that require rapid hemostasis, as well as growing awareness and adoption of targeted blood management therapies. Advances in plasma fractionation and recombinant technologies, along with rising demand for safer, pathogen-reduced, and high-purity blood products, are also fueling market growth. Additionally, an aging population, higher incidence of trauma and cardiovascular surgeries, and expansion of healthcare infrastructure in emerging regions contribute to the increasing demand for fibrinogen concentrate.

Global Human Fibrinogen key players include CSL Behring, LFB Group, Shanghai RAAS Blood Products, Jiangxi Boya Bio-Pharmaceutical, GREEN CROSS, etc. Global top five manufacturers hold a share about 90%. Asia-Pacific is the largest consumption market, with a share about 60%, followed by Americas and Europe, total have a share over 30 percent. In terms of product, Human Fibrinogen Concentrate is the largest segment, with a share over 99%. And in terms of application, the largest application is
