Growth hormone (GH), also known as somatotropin (or as human growth hormone in its human form), is a peptide hormone that stimulates growth, cell reproduction, and cell regeneration in humans and other animals. It is thus important in human development. It is a type of mitogen which is specific only to certain kinds of cells. Growth hormone is a 191-amino acid, single-chain polypeptide that is synthesized, stored, and secreted by somatotrophic cells within the lateral wings of the anterior pituitary gland.

For industry structure analysis, the Human Growth Hormone industry is very concentrated. These manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top five producers include Novo Nordisk, Pfizer, Eli Lilly, Merck Serono and F. Hoffmann-La Roche, account for more than 80% of the revenue market. Regionally, North America is the biggest production value area of valves, also the leader in the whole Human Growth Hormone industry.

North America occupied 42% of the production market. It is followed by Europe and China, which respectively have around 27% and 16% of the global total industry. Other countries have a small amount of production. Geographically, North America was the largest consumption market in the world, which took about 44.59% of the global consumption volume.
