## Abstracts

According to our (Global Info Research) latest study, the global Human Induced Pluripotent Stem Cells (iPSCs) market size was valued at US\$ 160 million in 2025 and is forecast to a readjusted size of US\$ 498 million by 2032 with a CAGR of 17.8% during review period.

Induced pluripotent stem cells (iPSCs) are genetically reprogrammed adult cells that exhibit a pluripotent stem cell-like state similar to embryonic stem cells.<sup>1</sup> While these artificially generated cells are not known to exist in the human body, they show qualities remarkably similar to those of embryonic stem cells (ESCs); thus, iPSCs are an invaluable resource for drug discovery, cell therapy, and basic research.
