Cremation Equipment refers to the machinery and technology used to cremate human remains. The primary equipment used in this process is a cremator.

Cremators are industrial furnaces designed specifically for cremation. They are typically constructed of high-temperature-resistant materials and are equipped with advanced combustion systems to ensure efficient and environmentally friendly operation. The cremation process involves placing the deceased in a cremation chamber, where they are subjected to high temperatures. This process reduces the remains to bone fragments, which are then pulverized into ashes.
