Abstracts

Human respiratory syncytial virus (HRSV) is a syncytial virus that causes respiratory tract infections. It is a major cause of lower respiratory tract infections and hospital visits during infancy and childhood. A prophylactic medication, palivizumab, can be employed to prevent HRSV in preterm (under 35 weeks gestation) infants, infants with certain congenital heart defects (CHD) or bronchopulmonary dysplasia (BPD), and infants with congenital malformations of the airway. Treatment is limited to supportive care, including oxygen therapy and more advanced breathing support with CPAP or nasal high flow oxygen.

Scope of the Report:

This report focuses on the Human Respiratory Syncytial Virus Drugs in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

One trend in the market is emergence of new entrants likely to change market dynamics. The growing demand for novel products for the treatment of RSV has fueled the emergence of new entrants that are likely to change the market dynamics during the forecast period.

The active participation of emerging economies toward research and development will drive the growth prospects for the market during the forecast period. The increasing R&D activities in emerging economies for RSV infection and its causes will fuel the development of novel drugs. One of the major factors responsible for the market's growth is the rising amount of patented therapies for RSV treatment that result in substantial R&D activities from various big pharma companies and research institutes.

For instance, in June 2016, the Lancet Respiratory Medicine reported that RSV was the most commonly detected pathogen linked with pneumonia among children in South Africa. Such new findings will increase the scope of anti-RSV drugs in new applications, such as pneumonia.

ROW accounted for the maximum market share during 2017 and continue to dominate the market for the next few years. One of the major factors responsible for the market's growth in the region is the growing incidence of RSV infections in ROW, including the BRIC nations.

The worldwide market for Human Respiratory Syncytial Virus Drugs is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
