Abstracts

A Humanized mouse model is a mouse carrying functioning human genes, cells, tissues, and/or organs. Humanized mice are commonly used as small animal models in biological and medical research for human therapeutics. Immunodeficient mice are often used as recipients for human cells or tissues, because they can relatively easily accept heterologous cells due to lack of host immunity.

Scope of the Report:

This report focuses on the Humanized Mouse Model in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In 2018, the genetic models segment accounted for the largest share of the humanized mouse models market. The factors contributing to the large share of this segment include its widespread use in compound analysis and biological efficacy & safety testing. Furthermore, the cell-based humanized mouse models is categorized into CD34, PBMC, and BLT humanized mouse models. In 2017, the CD34 models segment accounted for the largest share of the cell-based humanized mouse models market and is expected to register the highest growth rate during the forecast period. The major factors driving the growth of this market are usage of CD34 mouse models in in-vivo platforms for analyzing the safety and effectiveness of potential new drugs that can modulate the immune system.

Asia Pacific is expected to grow at the highest CAGR owing to international alliances for R&D activities in China, initiatives to reduce approval time for drugs, mandatory animal testing for all pharmaceutical drugs and cosmetics in China, increasing investments from the government and private sectors in China's life sciences sector, growing

biomedical and medical research, and research in regenerative medicine in Japan.

The worldwide market for Humanized Mouse Model is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
