According to our (Global Info Research) latest study, the global Humanoid Live-Line Working Robot market size was valued at US\$ 25.79 million in 2025 and is forecast to a readjusted size of US\$ 135 million by 2032 with a CAGR of 26.6% during review period.

In 2025, global Humanoid Live-Line Working Robot production reached approximately 36 units , with an average global market price of around US\$700k per unit.

A humanoid live-line working robot is an intelligent robotic system designed with a human-like structure (including arms, torso, and sometimes legs or mobile bases) to perform inspection, installation, and maintenance of power transmission and distribution systems without shutting down electricity. It integrates AI, vision systems, force control, and insulation technologies to safely operate in high-voltage environments, executing complex tasks such as stripping insulation, fastening components, and wiring. Its humanoid design allows it to work in human-oriented environments and use standard tools without infrastructure modification.

The upstream of humanoid live-line robots includes key component suppliers such as actuators and servo systems (e.g., Harmonic Drive, Nidec), AI chips (e.g., NVIDIA, Texas Instruments), sensors (LiDAR, force sensors), and insulation materials. The midstream consists of robot manufacturers and integrators such as State Grid Intelligent Technology, ABB, and FANUC. Downstream users are mainly power utilities like State Grid Corporation of China and China Southern Power Grid, as well as global energy operators for transmission maintenance and emergency repair.
