## Abstracts

According to our (Global Info Research) latest study, the global Humanoid Robot Drive System market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Humanoid Robot Drive System refers to a series of mechanical and electrical components used to transmit and control power in a humanoid robot. It includes but is not limited to motors, reducers, manipulators, bearings, etc. These components work together to achieve the movement and positioning of the robot joints and end effectors. The design and performance of the drive system directly affect the robot's motion accuracy, speed, stability and load capacity. In the robot's drive system, sensors and actuators are usually integrated to achieve closed-loop control and improve the system's responsiveness and accuracy.

With the growing demand for artificial replacement in the fields of medical care, factories, services, etc., the market demand for humanoid robots is also growing, which brings huge market potential to the drive system industry. It is expected that humanoid robots will be mass-produced in 2025, and the output is expected to reach more than 5 million units in 2030. In the future, there will be one humanoid robot per person, which will directly promote the rapid development of the drive system industry.
