Abstracts

The global Humanoid Robot market size is expected to reach \$ 40913 million by 2032, rising at a market growth of 49.5% CAGR during the forecast period (2026-2032).

A humanoid robot is a robot with its body shape built to resemble the human body. The design may be for functional purposes, such as interacting with human tools and environments, for experimental purposes, such as the study of bipedal locomotion, or for other purposes. In general, humanoid robots have a torso, a head, two arms, and two legs, though some forms of humanoid robots may model only part of the body, for example, from the waist up. Some humanoid robots also have heads designed to replicate human facial features such as eyes and mouths. Androids are humanoid robots built to aesthetically resemble humans.

As the core carrier for humanoid robots to realize anthropomorphic functions, the limb system integrates cutting-edge technologies from multiple disciplines, such as mechanical engineering, material science, and electronic control. Its technical architecture is mainly composed of actuators, sensor systems, power supplies, and new materials. The collaborative innovation of each subsystem is driving the industry into a stage of explosive growth.

1. The actuator includes rotary actuator, linear actuator and end effector.

The core components of rotary actuator: frameless torque motor, planetary reducer and harmonic reducer, etc. Using the golden combination of 'motor + reducer', there are currently two mainstream technical routes: one is to use a high-torque motor with a low-reduction ratio planetary reducer. This solution has certain cost advantages and is a relatively economical solution, suitable for scenes with low precision requirements; the other is to integrate a high-speed low-torque motor + harmonic reducer. This solution is

more expensive, but the robot's motion control is relatively accurate. In the field of precision reducers, the current suppliers that can provide solutions for humanoid robots include Harmonic Drive, Nabtesco, Leader Harmonious Drive Systems Co., Ltd, Zhejiang Laifual Drive Co., Ltd, Nidec Drive Technology, Shenzhen With Sichuan Technology Co., Ltd, Shenzhen PICEA Motion Technology, etc.

Linear actuators are mainly components that realize linear motion such as extension, such as lead screws. A humanoid robot may use 2-3 types of lead screws, such as the Tesla Optimus, which uses trapezoidal lead screws and planetary roller screws. The cost and performance of each type are quite different, among which planetary roller screws are the mainstream direction in the future, but the current cost is relatively high.

The end effector is mainly a dexterous hand. According to the number of fingers, there are two fingers, three fingers, four fingers and five fingers. Technical miniaturization and multi-degree of freedom are the key trends in the future. The characteristics of multi-degree of freedom enable the human hand to flexibly complete various grasping tasks and delicate and complex operations.

2. In terms of humanoid robot sensors, there are many types involved, including inertial measurement units (IMUs), visual sensors, tactile sensors, six-dimensional force sensors, joint torque sensors, etc. Their core functions are mainly to achieve complex perception functions. Technically, high precision, multi-dimensionality, and high integration are the mainstream trends in the future.

3. In terms of robot materials, lightweight materials are the focus. With lightweight materials, humanoid robots have higher flexibility and work efficiency, and also ensure the safety of the human-robot collaboration process. For example, the Tesla Optimus G2 humanoid robot uses PEEK material to reduce weight, and its walking speed is 30% higher than that of the Optimus G1.

4. Judging from the current market situation, most humanoid robots have only realized basic interactive capabilities such as walking, running, and jumping, and the realization of specific functions in specific scenarios is still under exploration. In the future, the direction of humanoid robots is to replace or assist humans in completing various tasks, and will play an important role in various application scenarios.

5. Globally, humanoid robot suppliers mainly come from China, the United States and Japan, of which Chinese companies account for 51% and the United States accounts for about 23%. In terms of market competition, the mainstream suppliers are still robot companies, such as Unitree Robotics and UBTECH Robotics Inc in China; Agility Robotics, Boston Dynamics (Hyundai), Figure AI in the United States, etc. In addition, there are some cross-border companies, such as Tesla, Xiaomi, Xiaopeng, etc.

6. The current humanoid robot industry has crossed the technological embryonic stage

and officially entered a period of rapid expansion. This high-speed expansion trend is triggering a deep reconstruction of the industrial structure, showing a typical 'dual-track competition' feature:

In the mainstream track, leading companies with full-stack technology integration capabilities are accelerating the construction of competitive barriers. Such companies often hold three core chips - motion control algorithms that have undergone iterative verification, vertically integrated supply chain systems, and large-scale manufacturing capabilities. They continuously optimize the synergistic efficiency of reducers, motors, and drivers, compressing the BOM cost of the entire machine to below the industry average, forming a Matthew effect in the general humanoid robot market. In the segmented track, start-ups and cross-border players are competing with the strategy of 'breaking through the segmented market'. Such companies focus on specific scenario needs: such as medical assistance, educational companionship scenarios, etc. This differentiation trend is essentially the result of the resonance between technology maturity and market demand, and the market will eventually present a 'pyramid' structure.

This report studies the global Humanoid Robot production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Humanoid Robot and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Humanoid Robot that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Humanoid Robot total production and demand, 2021-2032, (Units)

Global Humanoid Robot total production value, 2021-2032, (USD Million)

Global Humanoid Robot production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Units), (based on production site)

Global Humanoid Robot consumption by region & country, CAGR, 2021-2032 & (Units)

U.S. VS China: Humanoid Robot domestic production, consumption, key domestic

manufacturers and share

Global Humanoid Robot production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Units)

Global Humanoid Robot production by Type, production, value, CAGR, 2021-2032, (USD Million) & (Units)

Global Humanoid Robot production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Units)

This report profiles key players in the global Humanoid Robot market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include AgiBot, Leju Robot, Unitree Robotics, GalaXea AI, Li-Gong, Galbot, YMBot, UBTECH Robotics, Atribot, iSAGEBOT, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Humanoid Robot market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), volume (production, consumption) & (Units) and average price (K USD/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.

1 SUPPLY SUMMARY

- 1.1 Humanoid Robot Introduction
- 1.2 World Humanoid Robot Supply & Forecast
 - 1.2.1 World Humanoid Robot Production Value (2021 & 2025 & 2032)
 - 1.2.2 World Humanoid Robot Production (2021-2032)
 - 1.2.3 World Humanoid Robot Pricing Trends (2021-2032)
- 1.3 World Humanoid Robot Production by Region (Based on Production Site)
 - 1.3.1 World Humanoid Robot Production Value by Region (2021-2032)
 - 1.3.2 World Humanoid Robot Production by Region (2021-2032)
 - 1.3.3 World Humanoid Robot Average Price by Region (2021-2032)
 - 1.3.4 North America Humanoid Robot Production (2021-2032)
 - 1.3.5 Europe Humanoid Robot Production (2021-2032)
 - 1.3.6 China Humanoid Robot Production (2021-2032)
 - 1.3.7 Japan Humanoid Robot Production (2021-2032)
- 1.4 Market Drivers, Restraints and Trends
 - 1.4.1 Humanoid Robot Market Drivers
 - 1.4.2 Factors Affecting Demand
