## Abstracts

According to our (Global Info Research) latest study, the global Humidified Tandem Differential Mobility Analyzer (HTDMA) market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Humidified tandem differential mobility analyzer (HTDMA) is a highly specialized analytical instrument used to study the hygroscopic properties and particle size distribution of aerosol particles under different relative humidity conditions. HTDMA combines the particle size selection function of a differential mobility analyzer (DMA) and a humidity control system to achieve simultaneous measurement of the hygroscopicity and size distribution of aerosol particles by precisely controlling the electric field, airflow and relative humidity.
