According to our (Global Info Research) latest study, the global Humidity Sensor market size was valued at USD 758.6 million in 2023 and is forecast to a readjusted size of USD 1161.8 million by 2030 with a CAGR of 6.3% during review period.

Humidity sensor or hygrometer detects moisture from its surrounding and converts it into small electrical pulses which are recorded, displayed and stored in the device to trigger an alarm when the humidity is above a certain level. The sensor comprises of two metallic plates with a non-conductive polymer film between them. It registers humidity through the change in voltage between these plates.

The humidity sensors offer more advantages than conventional sensors due to low power consumption for their operation, the convenience of installation. It also enhances the transducer operation that includes structure design, sensing elements, fabrication technologies, and the principle of mechanism. However, the increased competition among market players has led to a decrease in market prices of humidity sensors and are considered a major hindrance to the market.
