Hunting bipods are a support device installed on the front of a rifle to improve shooting stability and accuracy. They usually have a retractable double-leg structure that can flexibly adjust the height and tilt angle according to the terrain and shooting angle. Hunting bipods are made of lightweight materials (such as aluminum alloy or carbon fiber), taking into account portability and durability. They are suitable for a variety of hunting environments such as mountains, grasslands, and forests, helping hunters reduce fatigue and improve hit rates when aiming for a long time or shooting at long distances. Depending on the design, some high-end models are also equipped with functions such as quick folding, rotation adjustment, and buffering and shock absorption. They are an indispensable and important equipment in modern hunting and shooting sports.
