According to our (Global Info Research) latest study, the global HVAC Chillers market size was valued at USD 7318.7 million in 2023 and is forecast to a readjusted size of USD 9039.4 million by 2030 with a CAGR of 3.1% during review period.

Heating, ventilation, and air conditioning (HVAC) chillers are equipment used to cool a building or an equipment. HVAC is an assembly of various types of equipment installed together to provide heating and cooling. It is also used in different industries to keep the machinery running by maintaining the temperature of the place where machines are installed.

One of the primary drivers for this market is the growing demand for district cooling. District cooling is replacing the traditional air cooling methods because of increased advantages like energy-saving, low environmental damage, and reduced maintenance needs. Furthermore, the increasing tourism market in nations of MEA and Asia has enhanced the construction of hotels and public infrastructure, which make extensive use of district cooling. HVAC chillers are one of the major facilities of district cooling. Also, the demand for airports, sports complexes, religious sites, and public infrastructure in the Southeast Asian countries will augment growth in the global HVAC chillers market during the forecast period.
