## Abstracts

According to our (Global Info Research) latest study, the global HVAC Electric Drive System market size was valued at US\$ 357 million in 2025 and is forecast to a readjusted size of US\$ 536 million by 2032 with a CAGR of 6.0% during review period.

In 2025, global HVAC Electric Drive System production reached approximately 230k units , with an average global market price of around US\$1500 per unit.

An HVAC electric drive system refers to the motor drive and control system used in heating, ventilation, and air conditioning equipment to drive compressors, fans, pumps, circulating pumps, electronic expansion valves, and related actuators. It typically consists of motors, variable frequency drives or inverters, power modules, controllers, sensors, connectors, wiring harnesses, and control algorithms. Its core function is to convert electrical energy and precisely control mechanical output for efficient cooling, heating, ventilation, air circulation, and thermal management. Compared with traditional fixed-speed drive solutions, electric drive systems can adjust speed and output power according to load changes, thereby reducing energy consumption, improving comfort, lowering noise, and extending equipment life. These systems are widely used in residential air conditioners, commercial HVAC systems, heat pumps, chillers, building HVAC systems, data center cooling, and electric vehicle thermal management systems, making them key components in the efficiency, intelligence, and electrification upgrade of HVAC equipment.

The upstream of the HVAC electric drive system industry chain mainly includes suppliers of electrical steel, copper wire, permanent magnet materials, aluminum alloy structural parts, power semiconductors, IGBT/MOSFET/SiC devices, PCBs, capacitors,

inductors, sensors, connectors, wiring harnesses, control chips, and thermal management materials. Among these, motor materials, power devices, and control chips have a significant impact on system efficiency, reliability, and cost. Representative upstream companies include Nippon Steel, Baowu Steel, Jiangxi Copper, Hitachi Metals/Proterial, TDK, Infineon, STMicroelectronics, onsemi, Texas Instruments, Microchip, Murata, TE Connectivity, and Amphenol. The midstream consists of motor, compressor, variable frequency drive, drive controller, and HVAC system integration companies, which are responsible for motor design, power electronics integration, thermal management control, system matching, and reliability validation. Representative companies include Daikin, Mitsubishi Electric, Panasonic, Johnson Controls, Carrier, Trane Technologies, Emerson, Danfoss, ABB, Siemens, Schneider Electric, and Nidec. Downstream applications mainly include residential buildings, commercial buildings, industrial plants, data centers, hospitals, hotels, and rail transit. Typical customers include Amazon Web Services, Microsoft, Google, Equinix, Hilton, Siemens, and Honeywell. Overall, the value chain is characterized by “upstream power electronics and motor materials determining efficiency and cost, midstream drive control and system integration determining performance, and downstream demand from energy-efficient buildings, data centers, and public/commercial facilities driving market growth.”
