According to our (Global Info Research) latest study, the global HVAC Refrigerant market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A refrigerant is a substance or mixture, usually a fluid, used in a heat pump and refrigeration cycle. In most cycles it undergoes phase transitions from a liquid to a gas and back again. Many working fluids have been used for such purposes. Fluorocarbons, especially chlorofluorocarbons, became commonplace in the 20th century, but they are being phased out because of their ozone depletion effects. Other common refrigerants used in various applications are ammonia, sulfur dioxide, and non-halogenated hydrocarbons such as propane.

The growing emphasis on global warming and climate change has resulted in the implementation of stringent regulations for cleaner, safer, and more energy-efficient households and workplaces worldwide. This has propelled building owners to renovate old buildings, including replacing or retrofitting existing HVAC equipment for making them more energy-efficient. These efforts to phase out the currently used refrigerants will lead to an increased demand for replacement of refrigerants, thereby aiding the growth in the HVAC refrigerant market.

The Global Info Research report includes an overview of the development of the HVAC Refrigerant industry chain, the market status of Food Service (Fluorocarbons, Hydrocarbons), Food Processing (Fluorocarbons, Hydrocarbons), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of HVAC Refrigerant.
