The global HVAC Temperature Control Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Temperature control valve has been widely used in residential buildings in recent years. The temperature control valve is installed on the heating radiator of residential and public buildings. The temperature control valve can set the room temperature according to the different requirements of users. Its temperature sensing part constantly feels the room temperature and automatically adjusts the heat supply at any time according to the current heat demand to prevent the room temperature from overheating and reach the highest comfort level of users. The temperature control in the user's room is realized through the radiator thermostatic control valve.
