Abstracts

The global HVO or HEFA market size is expected to reach \$ 37140 million by 2029, rising at a market growth of 15.4% CAGR during the forecast period (2023-2029).

HEFA (Hydroprocessed Esters and Fatty Acids), also called HVO (Hydrotreated Vegetable Oil), is a renewable diesel fuel that can be produced from a wide array of vegetable oils and fats. The term HEFA or HVO is used collectively for these biogenic hydrocarbon-based renewable biofuels. HVO is free of aromatics and sulfur and has a high cetane number. It is a so-called drop-in fuel, meaning that it is chemically equivalent to fossil diesel fuel and can be used in existing diesel engines without technical blend walls. One challenge that the production of HVO is facing is to find enough suitable and sustainable feedstock.

This report studies the global HVO or HEFA production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for HVO or HEFA, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of HVO or HEFA that contribute to its increasing demand across many markets.
