Abstracts

The global Hyaluronic Acid Containing Lidocaine market size is expected to reach \$ 6604 million by 2032, rising at a market growth of 15.6% CAGR during the forecast period (2026-2032).

In 2025, global Hyaluronic Acid Containing Lidocaine production reached approximately 29,000 liters, with an average global market price of around US\$80 per milliliter. In 2025, the global 's total production capacity of Hyaluronic Acid Containing Lidocaine reached 36,000 liters. The industry average gross profit margin of this product has reached 85%. Hyaluronic acid containing lidocaine, officially named Lidocaine-Containing Cross-linked Sodium Hyaluronate Gel for Injection, is a dermal filler used in medical aesthetics. Its main components include cross-linked sodium hyaluronate and lidocaine hydrochloride for local anesthesia. The product is injected into the dermis or subcutaneous tissue, utilizing hyaluronic acid to provide immediate volume support to improve wrinkles, fill facial depressions, or sculpt contours. Simultaneously, the lidocaine effectively reduces pain during injection, significantly improving patient comfort.

The industry chain has a clear structure: upstream are raw material suppliers providing pharmaceutical-grade sodium hyaluronate, lidocaine, and cross-linking agents. Midstream are core R&D and manufacturing companies, including domestic listed companies such as Bloomage Biotechnology, Aimeike, and Haohai Biotech, as well as various companies entering the market through independent R&D or by acquiring distribution rights. Downstream are sales and service organizations; the product is sold through direct sales or distribution models, ultimately reaching various compliant medical aesthetic institutions and hospitals. The entire chain is highly regulated, and companies must complete rigorous clinical trials and registration approvals before they

can be marketed.

The market has broad prospects, but competition is becoming increasingly fierce. The core growth driver stems from the continuous increase in the penetration rate of the domestic medical aesthetics market and consumers' clear demand for 'comfortable medical aesthetics.' Future development trends are polarized: on the one hand, the market has approved nearly 70 products, creating a highly competitive 'red ocean' situation, placing higher demands on companies' differentiated innovation; on the other hand, with increasingly stringent regulations and accelerated compliance processes, leading companies with Class III medical device licenses and core technological advantages will gain a larger market share, and industry concentration is expected to further increase
