According to our (Global Info Research) latest study, the global Hybrid Aircraft market size was valued at USD 495.7 million in 2023 and is forecast to a readjusted size of USD 878.4 million by 2030 with a CAGR of 8.5% during review period.

A hybrid aircraft is a powered aircraft which has fixed wings. Hybrid aircrafts are particularly applicable for long endurance flights. Hybrid aircrafts with rotary wings are used for heavy lift applications. Hybrid aircrafts are primarily operated by electricity. However, during take-off or climb, these aircrafts require large amount of power and this extra power requirement can be supplemented by energy produced from turbine generators. The power produced from turbine generators does not create sound pollution and with the help of hybrid power, these aircrafts can use this excess power to recharge the onboard batteries.

The key factors that triggering the growth of the hybrid aircraft market are the increasing terrorism globally. The extreme competition between nations to develop advanced aircraft is one of the major factors accountable for the growth of hybrid aircraft market. Moreover, growing environmental concern is accelerating the demand for hybrid aircraft across different applications globally.
