## Abstracts

The global Hybrid ATL-AFP Machine market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Hybrid ATL-AFP Machine is a piece of composite manufacturing equipment that includes dual-process systems - ATL (Automated Tape Laying) and AFP (Automated Fiber Placement) - in one platform.

Automated tape laying (ATL) is one of the most well-established automated manufacturing techniques for composites. Wide unidirectional tapes are laid onto a part mould using a loaded roller system with varying degrees of articulation, depending on the complexity of the part being manufactured.

Automated fiber placement (AFP), also known as advanced fiber placement, is an advanced method of manufacturing composite materials. These materials, which offer lighter weight with equivalent or greater strength than metals, are increasingly used in airframes and other industrial products.

This report studies the global Hybrid ATL-AFP Machine production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Hybrid ATL-AFP Machine, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2023 as the base year.
