According to our (Global Info Research) latest study, the global Hybrid CNC Machine market size was valued at US\$ 1340 million in 2024 and is forecast to a readjusted size of USD 2293 million by 2031 with a CAGR of 8.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Hybrid CNC machines combine multiple manufacturing technologies, such as traditional subtractive machining (e.g., milling, turning) and additive manufacturing (e.g., 3D printing), within a single platform. These machines are designed to streamline production processes by enabling seamless integration of various operations like cutting, additive layer deposition, grinding, and inspection, all on one machine. Hybrid CNC machines are widely used in industries requiring complex geometries, rapid prototyping, and reduced material waste, including aerospace, automotive, medical, and tooling.
