## Abstracts

The global Hybrid Electric Drive System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Hybrid Electric Drive System is a propulsion technology that combines an internal combustion engine (usually gasoline or diesel) with an electric motor and battery. It allows the vehicle to operate using either the internal combustion engine, the electric motor, or a combination of both, depending on the driving conditions and power requirements. The system uses regenerative braking to recharge the battery by converting the kinetic energy generated during braking into electrical energy. This energy is then stored in the battery and can be used to power the electric motor during acceleration or at low speeds, reducing the reliance on the internal combustion engine and improving fuel efficiency.

This report studies the global Hybrid Electric Drive System production, demand, key manufacturers, and key regions.
