## Abstracts

According to our (Global Info Research) latest study, the global Hybrid Epoxy-Cured Polyester Resin market size was valued at US\$ 1323 million in 2025 and is forecast to a readjusted size of US\$ 1888 million by 2032 with a CAGR of 5.3% during review period.

In 2025, global production of hybrid epoxy-cured polyester resin reached 467,700 tons, with an average selling price of US\$2,750 per ton. Global annual production capacity for hybrid epoxy-cured polyester resin is approximately 700,000 tons, with a gross profit margin of approximately 20.2%. Hybrid epoxy-cured polyester resin is a composite material that combines the advantages of epoxy and polyester resins, curing under specific conditions through a chemical reaction to form a resin material with excellent properties. The upstream of the hybrid epoxy-cured polyester resin industry chain includes polyester resin, epoxy resin, and curing agents; the midstream consists of hybrid epoxy-cured polyester resin manufacturers; and the downstream mainly includes industries such as home appliances, furniture, and 3C electronics.

Hybrid epoxy-cured polyester resins present a market trend of 'high performance, wide application, but relatively high cost.' They combine the excellent adhesion, durability, and impact resistance of epoxy resins with the cost advantages and good processability of polyester resins. They are widely used in high-strength coatings, composite materials, and adhesives in the automotive, construction, electronics, electrical insulation, and wind turbine blade industries. Meanwhile, market competition focuses on improving heat and chemical corrosion resistance, shortening curing time, optimizing processing techniques, and achieving low VOC, low odor, and more environmentally friendly production processes through formulation optimization. Overall, demand is growing steadily, but technological barriers and raw material price fluctuations have a

significant impact on the profit levels of the industry chain.
