Abstracts

Hybrid imaging involves the fusion of two (or more) imaging techniques to form a new technique. By combining the innate advantages of the fused imaging technologies synergistically, a new and more powerful modality comes into being. Some of the hybrid imaging techniques includes Photon Emission Transmission (PET)/Computed Tomography (CT), ultrasound and Magnetic Resonance Imaging (MRI), ultrasound and CT, MRI and CT, and others.

Scope of the Report:

This report studies the Hybrid Imaging market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Hybrid Imaging market by product type and applications/end industries.

The hybrid imaging market has witnessed a growing adoption of PET/CT hybrid imaging technology, owing to its advantages such as early diagnosis, accurate disease staging, and effective response to the treatment of chronic conditions such as cancer.

Additionally, PET/CT is the gold standard for oncology imaging and the manufacturers are further improving the technological capabilities of hybrid imaging systems. This will further improve the adoption rates worldwide. The restraining factors for the growth of hybrid imaging systems is site accreditation, dearth of skilled professionals, and high costs of imaging systems.

The global Hybrid Imaging market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Hybrid Imaging.
