Abstracts

According to our (Global Info Research) latest study, the global Hybrid Passenger Vehicle Exhaust System market size was valued at US\$ 2477 million in 2025 and is forecast to a readjusted size of US\$ 4274 million by 2032 with a CAGR of 7.2% during review period.

The exhaust system for hybrid passenger vehicles is a specialized exhaust treatment and muffler system designed for the internal combustion engine operation of hybrid electric vehicles. It consists of an exhaust manifold, a three-way catalytic converter, a muffler, exhaust piping, and related sensors. Its core function is to efficiently purify exhaust gases and control noise and vibration under conditions of intermittent engine start-stop, frequent hot-and-cold switching, and low-load operation. Compared to traditional gasoline vehicles, hybrid vehicle exhaust systems place greater emphasis on rapid warm-up, low-temperature emission control, and thermal shock resistance to address the issue of concentrated emissions during short engine starts. Simultaneously, it must be highly compatible with the electric drive system and energy management strategies to ensure compliance with increasingly stringent emission regulations without compromising overall vehicle NVH performance and fuel economy. In 2025, the average price of a hybrid passenger vehicle exhaust system was approximately \$275 per unit. The upstream components of a hybrid passenger vehicle exhaust system include the exhaust manifold, piping, three-way catalytic converter, muffler, and sensors. The industry average gross profit margin is approximately 10%-15%.
