## Abstracts

The hybrid power dual-motor controller controls the motor to work in accordance with the set direction, speed, angle, and response time through the active work of the integrated circuit. In electric vehicles, the function of the motor controller is to convert the electrical energy stored in the power battery into the electrical energy required to drive the motor according to instructions such as gear position, throttle, and brake, to control the start-up operation, advance and retreat speed, and climb of the electric vehicle. Driving conditions such as strength, or help electric vehicles to brake, storing part of the braking energy in the power battery.
