Abstracts

Smart parking solutions are a need for today owing to the increasing number of vehicles and the lack of parking spaces. Many companies are investing into the smart parking management market. Streetline has been recognized by Frost & Sullivan with the global product line strategy leadership award for the year 2016. Streetline uses machine learning techniques to deploy hybrid smart parking platform in order to merge data that is collected for real time parking guidance and analytics. Streetline is considered to be a world leader in smart parking solutions and management.

Scope of the Report:

This report focuses on the Hybrid Smart Parking Platform in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

North America region holds the largest market share of global hybrid smart parking platform market followed by Europe and Asia Pacific regions. The growth in North America region is mainly dominated by U.S. and Canada and is attributed to the increasing number of vehicles on street and growing awareness about pollution measures in the region. The region also has a well-established infrastructure which allows implementation of advanced technologies and better connectivity for real time data streaming.

Hybrid smart parking platform market has been segmented on the basis of component, parking type, solution and application. The parking type segment is further bifurcated into on street parking and off street parking. On street parking refers to parking of

vehicles along the streets whereas off street parking refers to parking of vehicles in the garages and parking lots. This is owing to the growing demand for smart city solutions and increasing need for parking space management in order to avoid traffic congestion and maintain better air quality by reducing the traffic problems.

Hybrid smart parking platform helps in optimizing parking resources with continuous streaming of data from streets. It offers real time analysis of data and accurate results on parking occupancy based on multiple data sources.

The worldwide market for Hybrid Smart Parking Platform is expected to grow at a CAGR of roughly 18.0% over the next five years, will reach 2120 million US\$ in 2023, from 790 million US\$ in 2017, according to a new GIR (Global Info Research) study.
