## Abstracts

According to our (Global Info Research) latest study, the global Hybrid Stepper Motors market size was valued at USD 1098.9 million in 2023 and is forecast to a readjusted size of USD 1524.3 million by 2030 with a CAGR of 4.8% during review period.

A stepper motor or step motor or stepping motor is a brushless DC electric motor that divides a full rotation into a number of equal steps. The motor's position can then be commanded to move and hold at one of these steps without any position sensor for feedback (an open-loop controller), as long as the motor is carefully sized to the application in respect to torque and speed. Stepper motors are available in three basic types; which are permanent magnet, variable reluctance and hybrid.

Hybrid stepper motors combine aspects of both permanent magnet (PM) and variable reluctance (VR) stepper motors. Like PM motors, they contain a permanent magnet in the rotor teeth. Two sets of teeth called cups ring the rotor. One ring is all south poles, and the other ring is all north poles.

Global Hybrid Stepper Motors key players include Shinano Kenshi, MinebeaMitsumi, Moons', Nidec Servo, etc. Global top four manufacturers hold a share over 70%.

China is the largest market, with a share over 30%, followed by Japan, and Southeast Asia, both have a share about 40 percent.
