According to our (Global Info Research) latest study, the global Hybrid Street Lighting Systems market size was valued at USD 880.5 million in 2023 and is forecast to a readjusted size of USD 1227.6 million by 2030 with a CAGR of 4.9% during review period.

A hybrid street lighting system is a standalone outdoor lighting system used to illuminate an open area or a street. The hybrid street lights are powered by solar and wind energy. The hybrid street lighting system typically consists of a compact fluorescent lamp (CFL) or light-emitting diode (LED) fixed inside as a luminaire, which is mounted on a pole.

The rise in government support is one of the primary drivers for market growth. The increased collaboration between the local governments, international organizations, and regional non-governmental organizations (NGOs) are also expected to contribute to the growth of the hybrid street lighting market. The rise in support has been observed due to the technology improvements offering better living conditions for citizens, and many schemes have been put in place across Asia and Africa for the development of the market. Moreover, these schemes, announced by the governments provide subsidies and discounts to the projects focussed on growth and application of the solar lighting schemes, and it also guarantees no cutting down of profit margins for the vendors. Thus, the growth of the market in developing countries propels the hybrid street lighting systems market in the future.
