Recently, lasers have made greater progress in the biomedical field, especially in minimally invasive surgery, due to their excellent inherent properties, collimation, and previous energy density. The role of lasers in biological tissues is mainly to utilize the laser biothermal effect, and lasers of different wavelengths and energies have different thermal effects on biological tissues. The hybrid thulium laser therapy device is a device laser with a rare earth element thulium as the gain medium. It can use high-energy, high-power laser beams to vaporize, carbonize, and coagulate tissues to achieve the purpose of surgical treatment.
