Abstracts

The pressure built up inside the storage tank is provided by an external source, which is either in the form of compressed gas or a raised weight. The traditional hydraulic accumulators operated with the help of weights. The weight is attached to the top of the piston, and due to the gravitational force on the weight, potential energy is developed in the accumulator. This type of accumulator creates a constant fluid pressure irrespective of the quantity or the rate. The main disadvantage of this type of hydraulic accumulator is that it is bulky and large in size.

Scope of the Report:

This report focuses on the Hydraulic Accumulators in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. One of the primary drivers for this market is the exponential rise of the machine tools market. Hydraulic accumulators find some crucial applications in machine tools. One of such imperative application is to prevent the fluctuations in oil requirements, as these machine units can be fitted with an accumulator to guarantee high starting speed as the oil columns have low inertia when compared with the complete pumping system. They facilitate accuracy and allow maximum precision during machine tool operations. Due to this advantage, the hydraulic accumulators are used in several industries like the automotive, aerospace and defense, telecommunications, industrial machinery, and chemical industries. This rising demand for demand for hydraulic equipment will directly impact the global hydraulic accumulator market during the forecast period. One of the latest trends gaining traction in this market is the development of energy-efficient hydraulic accumulator. Hydraulic equipment forms an essential part of the

manufacturing processes in various industries such as automotive, electrical and electronics, food, and pulp and paper. Thus, energy efficient hydraulic equipment is essential to reduce the cost of energy and to conserve resources against the backdrop of rising fuel costs, technological advances, rising demand for limited energy resources, and stringent government regulations. Consequently, companies, are extensively involved in R&D to manufacturing better hydraulic accumulator to improve their efficiency as well as safety. This high adoption of the energy-efficient hydraulic accumulator is expected to augment growth in the global hydraulic accumulator market in the coming years.

The worldwide market for Hydraulic Accumulators is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
