Hydraulic Anchor Windlass is a robust marine deck machinery system used for anchoring operations on ships and offshore platforms. Powered by hydraulic pressure, it is designed to raise, lower, and secure the anchor and chain with high force and precision. The hydraulic drive offers reliable performance under heavy loads, superior torque control, and better resistance to harsh marine environments compared to electric systems. This makes hydraulic windlasses particularly suitable for large vessels and applications requiring extended operational duty cycles or operation in extreme weather conditions. Hydraulic anchor windlasses are typically integrated with a hydraulic power unit (HPU), control valves, and a motor-pump assembly. They provide smooth and continuous operation, allow for adjustable speed control, and can be linked to centralized control systems on modern ships.
