Abstracts

Automatic bending machines are easy to use because they can load and unload workpieces that require bending. Automatic loading and unloading is beneficial and is useful when the workpiece is large and complex in shape. In semi-automatic bending machines, workpieces are fed manually, which causes inconvenience to these machines. Therefore, due to user-friendliness and high accuracy, compared to semi-automatic bending machines, the market for automatic bending machines is expected to continue to occupy a larger market share.

According to our (Global Info Research) latest study, the global Hydraulic Automatic Bending Machines market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
