According to our (Global Info Research) latest study, the global Hydraulic Breakers market size was valued at USD 1647 million in 2023 and is forecast to a readjusted size of USD 2047.5 million by 2030 with a CAGR of 3.2% during review period.

Hydraulic breakers are a type of mining drills that are used to break hard surfaces and big rocks. They are extensively used in the mining and construction industry.

River sand is used extensively in infrastructure projects due to their strong adhesive properties. The extraction of river sand is negatively impacting the environment and the wildlife. Governments across the globe are taking the substantial initiative to stop sand extraction and this is leading to the increasing adoption artificial sand. Technavio's market research analysts have identified the increasing demand for artificial sand as one of the primary factors that will trigger the growth of the hydraulic breakers market in the coming years. Artificial sand is produced by crushing granite or basalt rocks with the help of crushing equipment. The rocks do not fit the crushing machine due to its large size and hence hydraulic hammer is used to break large rocks into smaller rocks. The demand for crushing equipment are increasing and hence it is expected that the demand for hydraulic breakers will also increase during the forecast period.
