## Abstracts

According to our (Global Info Research) latest study, the global Hydraulic Circulation Valve market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The hydraulic circulation valve can be used not only as a packer upper bypass, but also as a circulation valve to circulate the formation fluid in the pipe string after logging. When connected below the tester, it can be used as a bypass for the packer to help slow the pressure rise below the tester when the production packer is inserted. When connected above the tester, it acts as a recirculation valve when the work string is lifted.
