The global Hydraulic Cylinder Timing Control Integrated Hot Runner System market size is expected to reach \$ 328 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

The hydraulic cylinder-controlled integrated hot runner system is an injection molding system that uses hydraulic cylinders to drive valve needles in a needle valve hot runner system, opening or closing gates in a set sequence. This optimizes mold filling balance, surface quality, dimensional stability, and multi-point injection molding effects.

Upstream components mainly include mold steel, manifold and nozzle materials, heaters, thermocouples, seals, hydraulic cylinders, hydraulic circuits, valve needle controllers, and temperature control elements. Downstream applications are primarily in the injection molding of plastic products for automobiles, home appliances, electronics, industrial components, packaging, and high-appearance-requirement products.

The global unit price of a hydraulic cylinder-controlled integrated hot runner system is \$8,500, with annual sales of approximately 26,000 units, global production capacity of 40,000 units, and an industry profit margin of 13.5%.

This report studies the global Hydraulic Cylinder Timing Control Integrated Hot Runner System production, demand, key manufacturers, and key regions.
