According to our (Global Info Research) latest study, the global Hydraulic Dredger market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Hydraulic dredger is a type of dredger that uses hydraulic power to excavate and remove sediment, debris, or other materials from the bottom of a body of water. Hydraulic dredgers work by pumping water through a series of hoses or pipes, which are connected to a hydraulic cutting head or suction nozzle. The cutting head or nozzle loosens the sediment, which is then sucked up by the dredger's pump and transported to a discharge location, such as a barge or shoreline. Hydraulic dredgers are commonly used for maintenance dredging, channel deepening, and land reclamation projects in ports, harbors, and waterways.
