Hydraulic Driven Hydrogen Compressor represents a critical component that utilizes hydraulic power to efficiently compress hydrogen gas, with smooth transmission capabilities and stepless speed adjustment ensuring optimal performance across varying operational demands . The integration of an open-loop hydraulic system provides a continuous flow of oil to drive the hydraulic cylinder, dictating the compression speed while maintaining precise control over pressure ratios up to 1034 bar (15,000 psi) for hydrogen and other gases . Engineered for excellence, these compressors are constructed from hydrogen-compatible materials and offer flexibility in system design, allowing for easy upgrades to custom configurations as operational requirements evolve . The hydraulic drive mechanism ensures reliable, safe, and continuous operation, meeting major international safety codes while delivering high-pressure compression exactly when and where needed. In 2025, global Hydraulic Driven Hydrogen Compressor production reached approximately 688 units with an average global market price of around k US\$488.9 per unit.
