## Abstracts

According to our (Global Info Research) latest study, the global Hydraulic Eagle Beak Shears market size was valued at US\$ 1482 million in 2025 and is forecast to a readjusted size of US\$ 2328 million by 2032 with a CAGR of 6.6% during review period.

In 2025, global sales of Hydraulic Eagle Beak Shears reached 80,000 units, with an average selling price of US\$18,000 per unit. Hydraulic Eagle Beak Shears are hydraulic attachments installed on excavators and other construction machinery, primarily used for steel structure demolition, scrap steel recycling, and building dismantling. They achieve efficient shearing of metal materials through a hydraulic system that drives high-strength shear blades. Their structure resembles an eagle's beak, possessing powerful biting and shearing forces, capable of quickly cutting steel beams, reinforcing bars, and various metal components. They are widely used in building demolition, resource recycling, and emergency rescue scenarios.

Upstream raw materials mainly include high-strength alloy steel, hydraulic cylinders, seals, and wear-resistant blades. Downstream customers are primarily demolition companies, scrap steel recycling enterprises, and construction machinery rental companies. Future development lies in larger scale, high wear-resistant materials, and intelligent control. Global total production capacity is approximately 120,000 units, with an industry gross profit margin of approximately 28%. Downstream consumption is comprised of approximately 50% for demolition projects, 35% for scrap steel recycling, and 15% for other emergency and special applications. Upstream material consumption mainly consists of steel and hydraulic system components.

With the development of urban renewal, infrastructure renovation and the recycling

industry, market demand continues to be released, and the demand for high-efficiency dismantling brings significant business opportunities.
