According to our (Global Info Research) latest study, the global Hydraulic Engine Starting System market size was valued at USD 1224.5 million in 2023 and is forecast to a readjusted size of USD 1471.5 million by 2030 with a CAGR of 2.7% during review period.

This report focus on Hydraulic Engine Starting System market.

A starter (also self-starter, cranking motor, or starter motor) is a device used to rotate (crank) an internal-combustion engine so as to initiate the engine's operation under its own power. Starters can be electric, pneumatic, or hydraulic. In the case of very large engines, the starter can even be another internal-combustion engine.

Some Diesel engines from six to 16 cylinders are started by means of an hydraulic motor. Hydraulic starters and the associated systems provide a sparkless, reliable method of engine starting over a wide temperature range.

Hydraulic starting's major advantage: by cranking engines faster at a higher torque, the engines start more quickly. The instant availability of torque is particularly effective in cold weather. In addition, elimination of electrical connections (coupled with the availability of beryllium copper gears) results in sparkproof starter operation.
