According to our (Global Info Research) latest study, the global Hydraulic Guiding Device market size was valued at US\$ 324 million in 2024 and is forecast to a readjusted size of USD 442 million by 2031 with a CAGR of 4.1% during review period.

Hydraulic Guiding Device is an industrial guiding device based on hydraulic transmission technology, which is mainly used to correct the position deviation of heavy materials (such as steel plates, steel strips, large coils, conveyor belts, etc.) during production or transportation. It drives the actuator (such as hydraulic cylinders, rollers or push plates) through the hydraulic system to adjust the material horizontally or vertically. It is suitable for high-load and high-impact industrial scenarios, including steel metallurgy, port logistics (belt conveyors), heavy machinery manufacturing, mining conveyor systems, papermaking and rubber industries.
