## Abstracts

According to our (Global Info Research) latest study, the global Hydraulic Hammer market size was valued at USD 1649.4 million in 2023 and is forecast to a readjusted size of USD 1605.7 million by 2030 with a CAGR of -0.4% during review period.

The hydraulic hammer, also known as rock breaker, hydraulic breaker and hydraulic chisel, is a type of hydraulic tool or attachment that is used in demolition jobs which involve breaking up of large blocks and slabs of concrete and in excavation and quarrying of rocks and minerals. Hydraulic hammers are the modern descendants of pile drivers. Pile drivers are mechanical devices used to stake piles into the ground to lay the foundation for buildings. The advent of diesel, hydraulics, and pneumatics helped deliver the force needed to drive piles into the ground and accomplish larger construction projects. Hydraulic devices like the hydraulic hammer are based upon the theories of fluid mechanics and the work of Blaise Pascal and Daniel Bernoulli. A hydraulic system consists of a liquid, pump, pipes, motor, and output device. Hydraulics provides motive power to activate machinery by converting pressure exerted on a confined liquid medium into mechanical output. Pressure that is exerted on the enclosed, incompressible liquid is transferred equally in all directions and areas of the hydraulic system and is transmitted undiminished to the output device, which in this case is the hammer.

Global Hydraulic Hammer key players include Rammer, Atlas-copco(Krupp), Montabert (Joy Global), Furukawa, Indeco, etc. Global top five manufacturers hold a share about 40%. Europe is the largest market, with a share about 40%, followed by North America and China, both with a share about 15 percent.
